

Heather Lamb has spent the past nine years in the Oncology Molecular Diagnostics space. She initially started her career in 2008 with Myriad Genetics selling testing for BRCA & Lynch Syndrome. These are hereditary cancer syndromes which predispose someone to be at a higher risk for developing certain types of cancers. In 2013 Heather joined Life Technologies, which has subsequently become Thermo Fisher Scientific after a merger. While at Life she transitioned to selling two tests focused on Lung Cancer. Then in 2014 Heather accepted a position at Biocept as a part of the initial team that brought Liquid Biopsy to market.

Recently Heather joined NeoGenomics as their Manager of Oncology Business Development. Her experience and in-depth knowledge of the Oncology Diagnostics space has helped her to develop relationships with thought leaders and community physicians across Southern California. When she's not working, you're likely to find Heather in San Juan Capistrano riding her horse. She rides competitively in the sport of three-day eventing..... a combination of dressage, stadium jumping and cross country jumping.
